

1 What is a node?

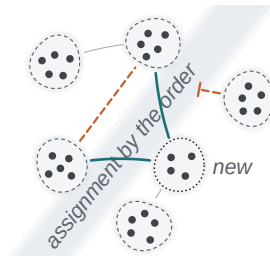

structured tendency
identified through
instances; the name
serves only as an index

2 What is a tie?

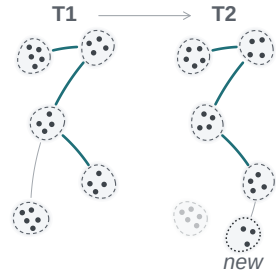

tie qualified by the
relational function it
carries; a trace of the
relation, not a proxy

3 Where do categories sit?

categories as operations
that relations reproduce
or refuse

4 What must persist over time?

the function must persist;
units may change

What can be claimed?

What relations do, and whether this holds as a tendency across layers, sites and time

— generative - - - - extractive — not qualified -□□- interview, ethnography, event

Schematic illustration, not a plot of the data.
